Re: Liberty VI/ Broadband VI Equipment Installation, Maintenance, and Removal

Dear Sir/Madame:

Your Tenant has contacted us about getting an Internet connection. That connection will require the installation of an exterior wireless antennae and the running of a wire (Ethernet cable) from the antennae to inside the structure. In most instances, this will require us to drill a hole in the structure in order to mount the antennae and run the wire. In performing the installation, we try to drill as few holes as possible.

We request your permission to make this installation as well as to enter upon the premises at reasonable times at the request of the Tenant, to service and to remove the equipment.

By signing below you authorize Liberty VI, former Broadband VI to install, maintain and remove the antennae and related equipment as described above. Should you have any specific questions about the installation, please feel free to give us a call.
